

# Overview

**Founded in December 2004, Jatheon Technologies has designed the world's first non-intrusive network appliance simplifying archiving, indexing, retrieval and dynamic monitoring of corporate email and messaging data.**

Jatheon has designed and developed Plug n Comply™, a family of appliance based email and message archiving solutions for companies seeking full regulatory compliance, internal policy management, storage space management, and e-discovery functionality. Jatheon offers an all-in-one comprehensive, cost effective, and easy to deploy archiving appliance. It requires minimal IT support, offering simple management of corporate messaging data and related policy implementation.

## Advanced Features

The Plug n Comply™ Family of appliances are designed to capture all incoming, outgoing, and internal messages, check all captured messages against user defined rules, flag and notify any violations, as well as index and store messages for future search and retrieval.

Jatheon's appliances offer comprehensive search functions either through a secure web based interface or by an integrated Microsoft Outlook Plug-in. Companies can also monitor messages for company policy violations or SEC compliance. Users have access to all of their personal data and compliance officers can package information as PST files or export the messages in a Portable Document File – PDF format.

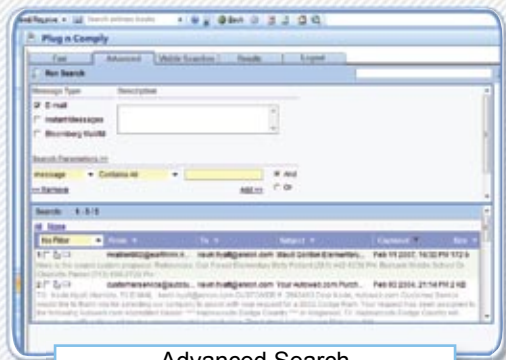

All Jatheon appliances include advanced message reporting, exporting to PDF or PST file formats, the ability to save common searches, audit trail for all activities, LDAP and Active Directory integration, and secure access via a web browser or Outlook Plug-in.

The appliance will work across many network platforms and email systems with interfaces available for MS Exchange, GroupWise and Lotus Notes. In addition to interfacing with messaging platforms, Jatheon has developed an innovative "packet sniffing" stealth acquisition technology that will allow the appliance to capture messages directly from the network even when customers outsource their mail services. The appliance itself is non-intrusive to the network.

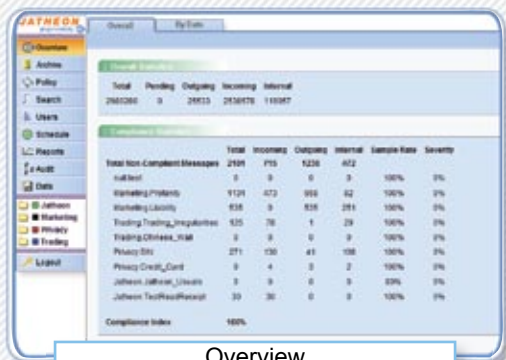

## Jatheon Solution

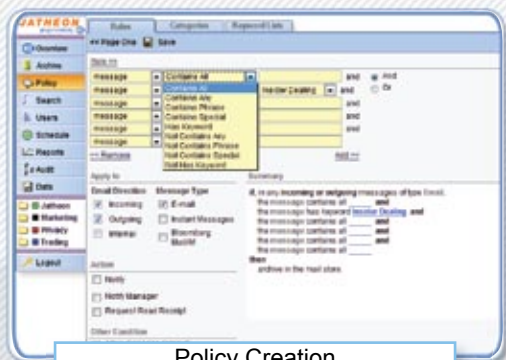

- \* **Offers a comprehensive compliance workflow that supports all compliance models**
  - Internal Review
  - External Mail Inbound/Outbound Review
- \* **Automates identification of suspect content**
  - Simple Policy Implementation
  - Natural Language Processing
- \* **Offers a comprehensive audit trail and evidence of review logging and reporting capabilities**
- \* **Integrates email archive with Write Once Read Many (WORM) storage devices**
- \* **Storage Space Management**
  - Offload electronic message data from active servers into manageable secure archival storage – safely preserved and searchable for years. Consistently provides a high compression ratio.
- \* **E-Discovery**
  - Ability to rapidly search and retrieve messages

Overview

Policy Creation

**Jattheon's Plug n Comply™ appliance is an integrated solution that is simple, secure and scalable, offering absolute control of confidential messaging data whether it is email or instant messaging.**

## Managing Exposure to Risk

As much as 70% of corporate intellectual property is stored within the messaging system. Email is mission critical, and often email servers are treated as corporate intelligence repositories – for which they were not designed.

The prospect of storing and retrieving email is daunting, as the sheer volume of email exchanged among enterprises is staggering. Recent research from the Radicati Group, Inc. states that the average corporate email user sends and receives 133 emails a day, equating to 16.4 MB per day of storage. This number is expected to rise to 21.4 MB per user, per day by 2010.

Email is a record; therefore, organizations can no longer rely on mail servers as the repository. Centralized access is essential for all users of an organization, as is the ability to set policies for regulatory and corporate governance.

## The Highest Standard of Compliance

Jattheon's Plug n Comply™ technology allows organizations to meet and exceed the highest standards of regulatory compliance and operational performance. Our Plug n Comply™ systems solution allow organizations to effectively manage their federal, industry and corporate compliance commitments including SEC, NASD, NYSE, Sarbanes Oxley, USA Patriot Act, HIPAA and state regulated insurance legislation requirements. It also gives organizations the capability of real-time auditing and notification capabilities allowing executive management to reduce exposure to risk and respond rapidly on policy enforcement.

## Competitive Analysis

Evaluated against the compliance technology marketplace, Jattheon's broad feature set positions the company within the top tier of vendors who offer enhanced performance and auditing functions to customers. This gives the company's products greater appeal for customers who require archiving solutions for compliance purposes.

Overall, Jattheon offers a comprehensive, cost effective, and easy to deploy archiving appliance that requires minimal IT support and simple management of corporate data, making it a suitable solution for companies of all sizes in regulated industries and beyond.
